
1 23. (Amended) A system for internationalizing a mark-up document
2 which has a localization tag adapted to be detected by a localization tool and
3 in which localization information associated with the tag is retrieved and the
B1 4 localization tag in the document is replaced with a localized value in a
5 translational file associated with the localization information, said system
6 comprising:
7 a localization tool for detecting the localization tag and retrieving
8 localization information associated with the tag; and
9 a storage unit which stores the localized value in a translation file.
